PROFILE

Software Engineering student at Howest with hands-on experience building .NET backend systems, autonomous AI-agent workflows, and cloud-native services. Experienced with Azure, Docker, CI/CD, and MCP integrations

EDUCATION

Howest

Brugge, Belgium

Bachelor of Applied Computer Science – Software Engineering

Expected 2027

- Relevant Coursework: Distributed Systems, .NET, Advanced SQL, Domain-Driven Design, Networks.

TECHNICAL SKILLS

Languages: C#, TypeScript/JavaScript, Python, SQL

Backend: .NET, ASP.NET Core, Entity Framework Core, REST APIs, PostgreSQL, Clean Architecture

Cloud & DevOps: Azure, Azure Container Apps (ACA), Docker, GitHub Actions, Terraform, Linux

AI & Agentic Systems: AI Agent Workflows, Tool-Using Agents, Model Context Protocol (MCP)

Infrastructure & Messaging: Proxmox, Traefik, Tailscale, RabbitMQ, MQTT

EXPERIENCE

Skyline Communications

Izegem, Belgium

Cloud Ecosystem Student Job

August 2026 – September 2026

- Designed AI-agent workflows using Model Context Protocol (MCP) to retrieve, validate, and propose updates to organizational content.
- Implemented permission-controlled agent tools with auditable interactions and knowledge retrieval capabilities.
- Deployed a containerized cloud application to Azure using Docker, GitHub Actions, Azure Container Registry, and Azure Container Apps.

Skyline Communications

Izegem, Belgium

DevOps Engineer Student Job

July 2025 – August 2025

- Developed a distributed configuration management pipeline for deploying changes across remotely connected systems.
- Implemented configuration validation and rollback mechanisms to safely recover systems when configuration changes failed.

Codefever VZW

Roeselare, Belgium

Programming Teaching Assistant

September 2022 – Present

- Teach programming and web-development fundamentals while supporting students with debugging and problem solving.

PROJECTS

Solar Endurance Project

Pretoria, South Africa / Remote

Academic Project – Howest

April 2026

- Architected a real-time vehicle telemetry pipeline using MQTT and lightweight containerized services.
- Built reproducible deployment environments with Docker Compose for development and integration testing.
- Implemented reconnection and data-buffering mechanisms to reduce telemetry loss during unstable cellular connectivity.

Self-Hosted Infrastructure & Homelab | *Proxmox, Docker, Traefik, Tailscale*

June 2026

- Administered a Proxmox VE environment hosting containerized services and virtual machines.
- Implemented secure remote access through Tailscale, avoiding direct public exposure of administrative services.
- Configured Traefik for centralized reverse-proxy routing across self-hosted applications.
